Instructions:

1. Create index.html, copy and paste code below in your.

    ```
    <body>
    <button id="all">Print All people details</button> <br/><br/>
    <label>Enter the first name:
    <input type="text" id="name-input" size="20"> </label>
    <button id="age-button">Get Age</button>
    <br/><br/>
    <div id="solution"></div>
    <div id="solution1"></div>
    </body>
    ```
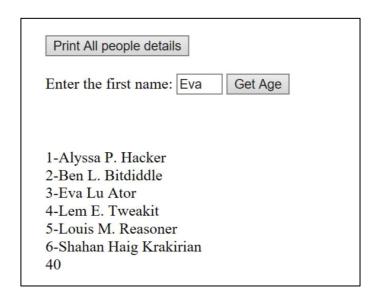

2. In the External js file, create a People object as below.

    ```
    var people = [
    {name: ['Alyssa', 'P.', 'Hacker'], age: 26},
    {name: ['Ben', 'L.','Bitdiddle'], age: 34},
    {name: ['Eva','Lu', 'Ator'], age: 40},
    {name: ['Lem', 'E.','Tweakit'], age: 45},
    {name: ['Louis','M.','Reasoner'], age: 21},
    {name: [ 'Shahan','Haig','Krakirian'], age: 26}
    ];
    ```

3. Create function fullNamelist to retrieve the list of people's full name.
4. Create function getAgefunction to retrieve the age by input the first name.
5. Create an event listener for the two buttons to retrieve the result as below

Tips: Use nested loop for "Print All People Details"
